

Abstract

The invention relates to an object (20) with information (16) to be secured provided thereon, such as a coding, identification, PIN number or the like, and a security cover sticker (18) for covering the information (16) to be secured. The object (20) and the information (16) to be secured have disposed therebetween an additional layer (30) whose adhesive power to the cover sticker (18) is greater at least in partial areas than the adhesive power of the additional layer (30) to the object (20).
